

# Young Energy Advocates Energy United – YEA *powered by AVL*

**The Future Energy System is climate neutral, renewable, and socially responsible. But how do we achieve the turnaround? We acknowledge that this will require an unprecedented effort and cross-sectoral information exchange and project work.**

**Who we are:** A solution-oriented network of inquisitive and motivated student trainees, apprentices, interns, etc. dealing with the topic of energy. The activity is primarily focusing on building a network for young students. There is, however, no age limit and senior experts are very welcome to accompany us and share their experiences!

**What we do:** We work together on sustainable and socially acceptable solutions for a greener future for everyone. We share our thoughts and information on how to achieve global energy security that is based on technologies that are free of fossil CO<sub>2</sub> emissions.

- Main topic areas: Power generation, hydrogen, energy grids, blackout & resilience, energy storage, decarbonization & de-fossilization
- Ground rules: fact-based, ideology-free, and technology open.
- Program: First, discuss, connect and learn. An additional later aim will be to work in teams with motivated people on regional and global challenges, invite experts, and form project development.
- Output: Use information & insights for daily work, but also to pass on our ideas to agencies, decision-makers, etc.
- Online teamwork: professional and social Networks, cooperation Platform & online Meetings
